ASSIGNMENT 02

Marks: 05

Instructions.

1. Deadline: Submit your assignment by **8-12-2023**

2. Submit the assignment on LMS in **PDF format**.

3. Copied/Plagiarized answers and late submissions will be marked **zero**.

[CLO2, PLO9, C3]

Generative AI

Generative AI refers to artificial intelligence systems capable of creating new content or data that resembles what humans might produce. These AI models learn patterns from vast amounts of data and use that knowledge to generate text, images, music, and more. In the context of language, models like GPT (Generative Pre-trained Transformer) are examples of generative AI that can understand, write, and create text across various topics and styles, demonstrating a high degree of language fluency and coherence.

You need to pinpoint actual cases where Generative AI has sparked ethical concerns? What role or responsibility do professionals hold in addressing these ethical considerations?
